

1. Write a program that will print your initials to standard output in letters that are nine (solution) lines tall. Each big letter should be made up of a bunch of '\*'s. For example, if your initials were "DJE", then the output would look something like:

```

*****          *****          *****
**      **          **          **
**      **          **          **
**      **          **          **
**      **          **          *****
**      **          **          **
**      **          **          **
**      **          **          **
*****          *****          *****

```

2. Write a C++ program to print 'Hello' on screen and then print your name on a separate line.

Expected Output:

**Hello**

**Alexandra Abramov**

3. Write a C++ program to print the following strings

Expected Output:

**Tomorrow I 'll learn C++ Data types.**

**This is a bad command: del c:\\*. \***

4. Write programs called PrintPatternX.cpp (where X from A to D) to print EACH of the following patterns. Use one "cout <<" for each line of outputs. End each line by printing an "endl".

```

* * * * *      * * * * *      * * * * *      *
* * * * *      *       *      *       *      * *
* * * * *      *       *      *       *      * *
* * * * *      *       *      * *      *      * *
* * * * *      * * * * *      *       *      *
(a)           (b)           (c)           (d)

```
